

ADVANCED ALLERGY THERAPEUTICS

ABOUT ADVANCED ALLERGY THERAPEUTICS

AAT is an advanced allergy therapeutic technology that eliminates most forms of allergies and the symptoms that accompany them. A breakthrough technology that merges western science with Traditional Chinese Medicine, AAT is non-invasive (no needles) and drug free. Allergies and the symptoms caused by them are due to a physiological error that causes the body to react negatively to substances which are in fact harmless. Unlike most allergy therapies that only treat symptoms, AAT treats the problem at its source by resetting the neuro-physiological response, eliminating the inappropriate responses.

HOW DOES THE TREATMENT WORK?

The treatment involves a gentle pressure along the spine to stimulate points that correspond with all of the major organ systems. According to Traditional Chinese Medicine, this stimulation relaxes the body and strengthens each of the major organ systems. This is done while the body is exposed to the digital representation of the substance that is stimulating an inappropriate response (allergy symptoms). The body associates the positive stimulus with the exposure to the allergen, and the body no longer perceives it as harmful.

HOW DO WE TEST?

Your practitioner makes a clinical assessment. We use all available information – including allergy tests if they have been done. Muscle Response Testing is used to tap into the body's "computer system" to accurately determine the substances that are creating inappropriate responses.

HOW MANY TREATMENTS WILL BE NEEDED?

This depends on how many allergies your pet has. We can treat one allergen "family" per visit. Treatment protocols will be outlined during the initial consultation.
